DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 25-35, 39-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Jitaru.

Jitaru discloses power converter assembly comprising: a printed circuit board (PCB) 28, a plurality of power semi-conductor components 22, 26 in the PCB assembly having two sets of different thermal properties, a first component set having heat generating properties; second component having heat dissipating and/or magnetic properties, means for thermally linking said first component set to said second component set 58, 30 whereby heat generated by at least one component from the first component set is dissipated by at least one component from the second component set; the thermally linking means comprises a heat conductive material to couple at least one component from the first component set to at least one component from the second component set; the heat conductive coupling material 58, 30 is in direct contact with one of the components and form either tracks or pads on the board 28 (see drawings); the heat conductive coupling material forms thermal vias 46 with one component on one side of the board and other component on the opposite side; the heat conductive coupling

material 30 consists of the conformable thermally conductive material, the components are arranged in close proximity to each other; the heat generating component 26 is at least partially housed within the heat dissipating component 58; the heat dissipating component is mounted above or under the heat generating component depending on orientation of the assembly; the heat dissipating component is thermally linked to more than one heat-generating component and heat generating components inherently have different thermal attributes over the PCB operating range.

Allowable Subject Matter

3. Claims 42-48 are allowed.
4. Claims 36-38 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter: the allowability, at least in part, resides in the assembly having the magnetic component as a separate magnetic surface mount PCB carrying plug-in interconnect legs for mounting on the board.
